

Where I'm Going

1. **Auto-positioning app published** and offered to Kyle through Liam
2. **Comfortable** with the skills needed to make it.
3. Have made it able to **collect data** from the user using it.

Where I'm At Now

- Pretty comfortable with Kivy;
- have a good source for learning it;
- understand SQLite3
- Do not currently understand:
 - how to trigger a bunch of addition of data via switches or radio buttons in Kivy/Python3
 - How to collect data from user use with Kivy/Python3
 - How to manipulate shapes using logic
 - How do I* organize information within a box in Kivy?
 - How do I* organize information within a box in Kivy?
 - How do I* change the font family of text
 - How to perhaps implement a DnD interface

Roadmap

1. Read 30 minutes for every non-understanding
2. Create a process for creating 13 Example
3. Create a 13 Examples post on each thing I* don't understand
